

DPT (Diphtheria, Pertussis, Tetanus) vaccines

Vaccines

[[Diphtheria](#) is a disease of poverty and poor sanitation similar to smallpox, which recalls Dr Mendelsohn comment: "*For thirty years kids died from smallpox vaccinations even though no longer threatened by the disease.*" Have a look at the early [Diphtheria vaccine](#) devastation, 'vaccine disaster' was coined for them. How can the Tetanus vaccine induce immunity, when contracting the disease naturally does not give immunity? DPT vaccination started the epidemic of [Autism](#) mostly due to its [mercury](#) component, and the pertussis portion is the most toxic vaccine after the 19 century ones--the UK gov has paid out for 900 seriously brain damaged victims of DPT yet now states it doesn't cause brain damage ([see](#)).]

WHOOPIING COUGH VACCINE PROVEN USELESS

"When in Germany, vaccinations against whooping cough were suspended between 1975 and 1991, the declining trend in the number of deaths from the disease continued as before."

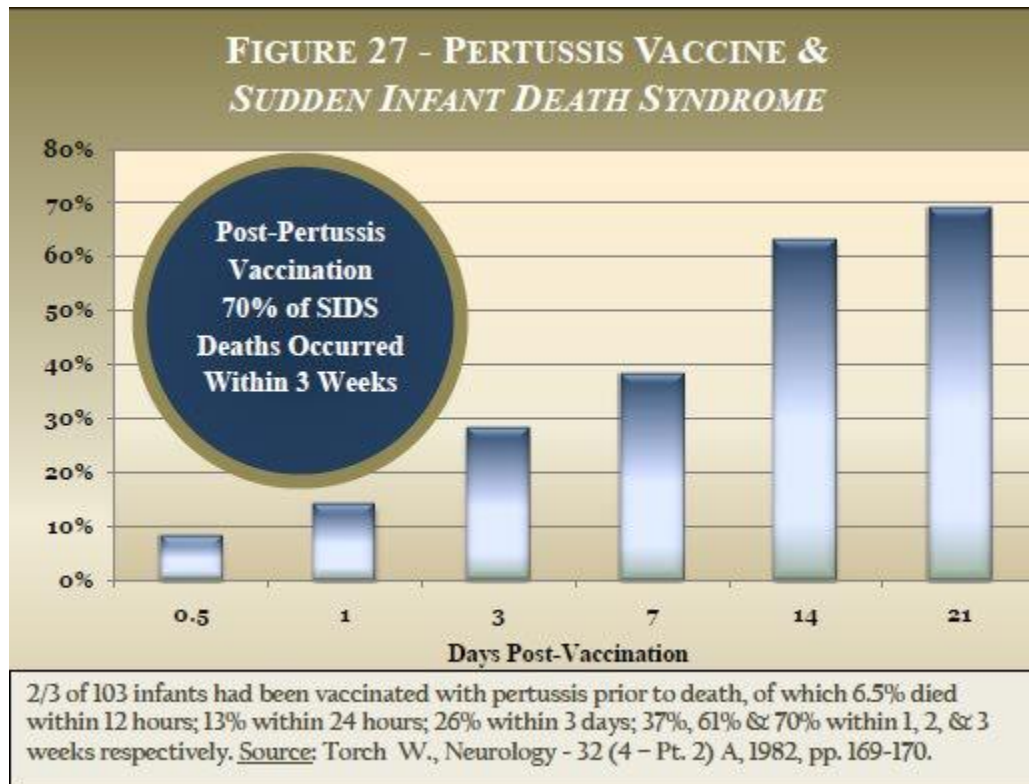

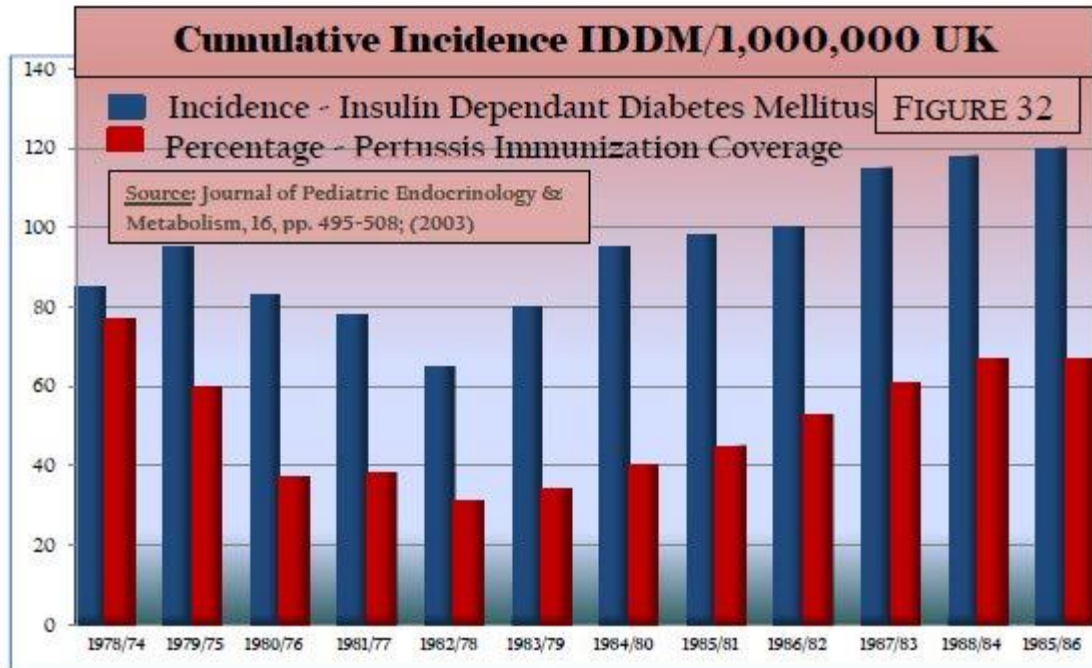

Dr. Gerhard Buchwald M.D.

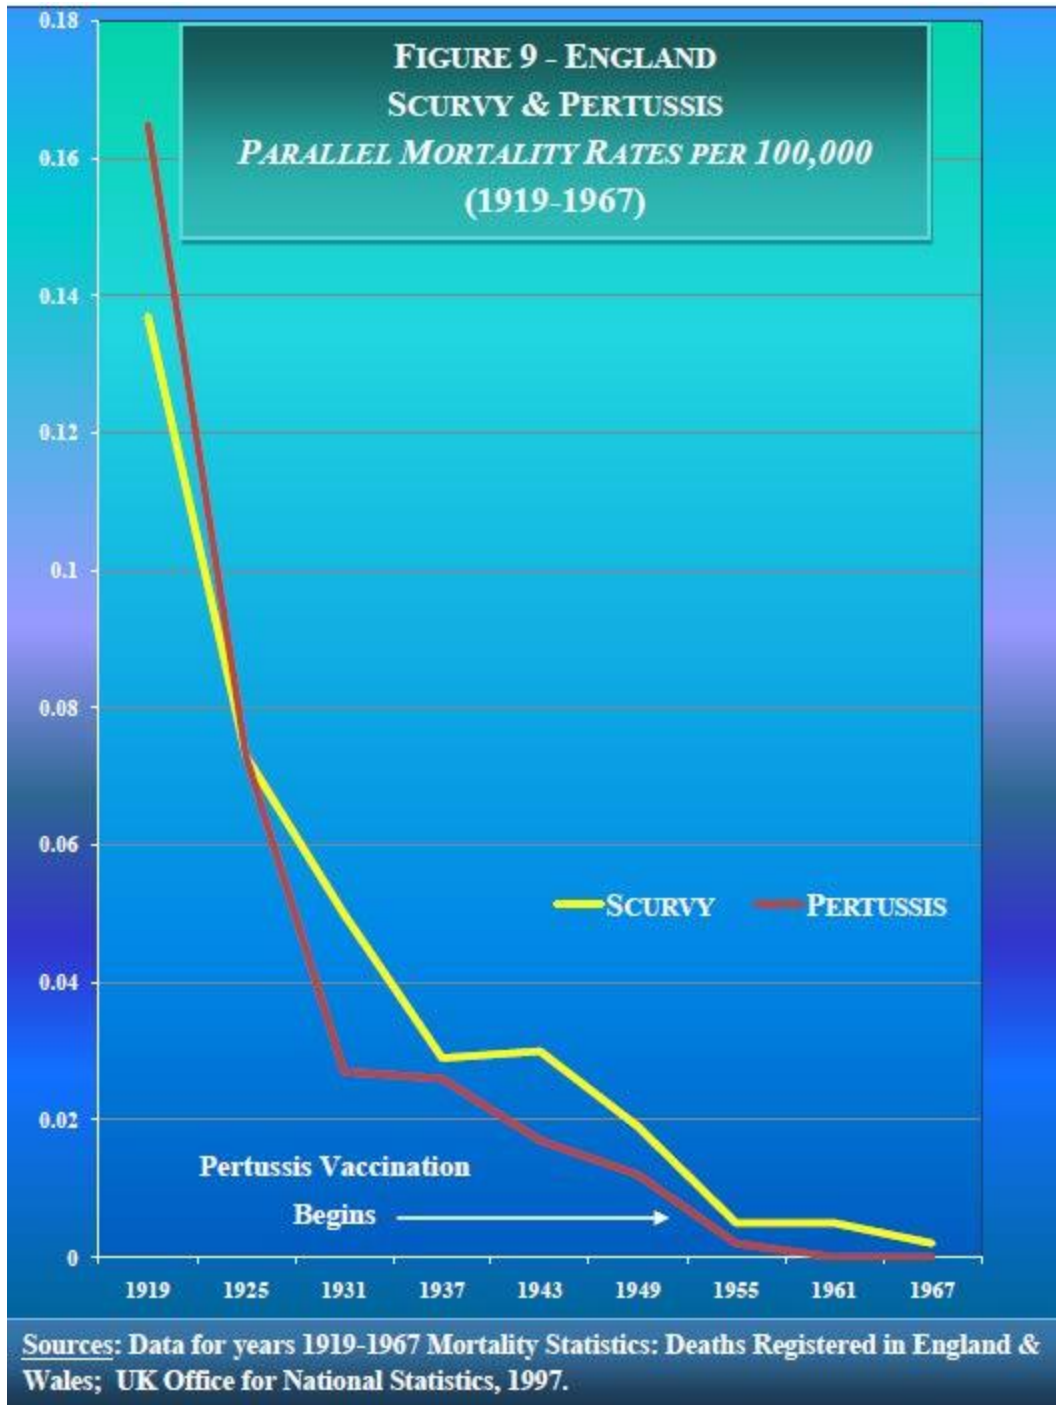

Book: 'The Decline of Tuberculosis despite "Protective" Vaccination'
