

## Vaccine failure quotes

[Vaccination quotes](#) [Vaccine failure](#)

### [Smallpox vaccine failure quotes](#)

"The reason vaccinations are promoted with such intensity is to prevent people from realising that vaccines do not protect and also in the event of an outbreak or an epidemic the vaccinated are as much at risk of becoming infected as the unvaccinated. The truth can be kept hidden if people's vaccination status remains unknown and if everyone is vaccinated, making a comparison with unvaccinated people impossible. This is also the real reason for the relentless push to vaccinate as many children as possible."-- Dr [Buchwald](#) (The Decline of Tuberculosis despite "Protective" Vaccination by Dr. Gerhard Buchwald M.D. p101)

"When in Germany, vaccinations against whooping cough were suspended between 1975 and 1991, the declining trend in the number of deaths from the disease continued as before."--Dr [Buchwald](#) (The Decline of Tuberculosis despite "Protective" Vaccination by Dr. Gerhard Buchwald M.D. p135)

"During 10 outbreaks of smallpox between 1947 and 1974 nearly 100 people became ill with smallpox---even though they had been vaccinated."Dr [Buchwald](#) (The Decline of Tuberculosis despite "Protective" Vaccination by Dr. Gerhard Buchwald M.D. p134)

"Clear and certain medical knowledge, namely that the BCG-vaccine is not only ineffective but also harmful, was kept quiet for 27 years (in Germany) while the vaccine continued to be used and children were being harmed by it....almost 500 (estimated) cases of vaccine damage per year."--The Decline of Tuberculosis despite "Protective" Vaccination by Dr. Gerhard [Buchwald](#) M.D. p119/117.

"Switzerland was affected by a **mumps** epidemic from Autumn 1999 until Spring 2000. The Swiss Federal Office for Health (BAG) eventually admitted, upon the pressure of the medical profession, that more than 75% of those who contracted Mumps had been fully up to date with their vaccinations<sup>29</sup>. No further comment is necessary here!"---[Anita Petek-Dimmer](#)

"The Rubini strain of vaccine virus has a lower efficacy, in fact, a general study showed it to have no protective efficacy."--[David Elliman](#), a vaccinator.

"The main fear that is propagandised with regard to **rubella** is the rubella embryopathy. What we are not told is, for example, that there were 4 cases of RE in Switzerland between 1995 and 2001 of which two women were fully vaccinated

against rubella<sup>30</sup>. The only protection a pregnant woman has from rubella is that she contracted rubella during her childhood. We should therefore offer our girls the chance to contract rubella."---[Anita Petek-Dimmer](#)

"In October, 1972. a seminar on **rubella** was held at the Department of Pathology, University Department, Austin Hospital in Melbourne, Australia. Dr. Beverly Allen, a medical virologist, gave overwhelming evidence against the effectiveness of the vaccine. So stunned was she with her investigations that it caused her, like a growing number of scientists, to question the whole area related to herd immunizations. Dr. Allen described two trials: the first trial concerned army recruits who were selected because of their lack of immunity as determined by blood tests. These men were given Cendevax, an attenuated rubella virus that is supposed to protect. They were then sent to a camp which usually has an annual epidemic of rubella. This occurred three to four months after they were vaccinated, and 80% of the so-called immune recruits became infected with rubella virus. A further trial shortly after this took place at an institution for mentally retarded people with similar effects. Additional disturbing evidence was sent to us by a Melbourne GP who was in the United Kingdom at the time that Chief Health Officer Sir Henry Yellowlees, had released a press statement (February 26, 1976) informing doctors that, in spite of high vaccination figures, there had been no detectable reduction in the number of babies born with birth defects."--Dr Archie Kalokerinos & Glen Dettman "Does Rubella Vaccination Protect?," Australian Nurses Journal, reprinted in The Dangers of Immunisation p54

"Tetanus is a very rare disease in developed countries: there are only about 12 cases of tetanus per year in Australia, and half of those who got it were vaccinated."---[Viera Scheibner](#)

"What they don't tell you is that a child who receives the MMR vaccine can still get measles. In an outbreak of measles in Texas in 1987, 96 percent of the cases were considered non-preventable. In other words, all the measles cases were either fully vaccinated, had a religious or medical exemption or were born before 1957.....According to the Panhandle Health District, 85 percent of the documented cases of pertussis had 4 out of 4 of their DPT shots and 15 percent had 3 out of 4 of their DPT shots.....The CDC statistics for this outbreak in all five northern counties states that out of 253 reported cases, 81.5 percent were fully vaccinated or had 4 out of 4 of their DPT shots."---[Ingri Cassel](#)

"There is good reason to doubt the accuracy of the Ministry of Health's figures regarding "immunized" and "unimmunized." All who had had only one injection are shut out of the " immunized " class, as are also those whose injections were made less than three months or six months before the development of diphtheria. (For a long time at Birmingham it was maintained that immunity did not develop until six months

after the last injection, and the general practice all over the country now is to insist on a limit of three months, and exclude from the " immunized " class all who were injected less than three months before attack.).....But in spite of all this "cooking " of the figures, the authorities have had to admit **some 36,000 immunized cases of diphtheria in Great Britain in the eight years 1941-48, and 239 deaths in the " immunized.**"--- [Lilly Loat](#) [Book 1951] The Truth About Vaccination and Immunization

"Polio vaccine, not only did not wipe out polio, as the proponents had claimed, but it actually increased it over 300% in some of the states which had compulsory polio vaccination, and the polio was in the vaccinated."--[E McBean](#) (p23 Vaccination Condemned)
