

# Gardasil – HPV Vaccine – The Injured Continue To Pile Up

Posted on April 26, 2011 by ChildHealthSafety

**S.A.N.E. VAX, INC.** FOR IMMEDIATE RELEASE [PRLog \(Press Release\)](#) – Apr 25, 2011

by Leslie Carol Botha  
 Vice President Public Relations, [SANE Vax Inc.](#)

It is becoming hard to comprehend why the United States government; FDA, CDC and the NCI have blatantly turned their backs on the thousands of families whose daughters and sons have been severely injured by Merck’s Gardasil vaccination. GlaxoSmithKline is not off the hook on this either as mounting injuries from Cervarix (approved in the US in 2009) are now being reported to VAERS. How many deaths and how many injuries is it going to take before these vaccines are taken off the market?

The latest	VAERS	reports	include:
376 abnormal pap smears post HPV vaccination			
108 reports of anogenital warts found after HPV vaccination			
224 reports of papillomavirus infections found after HPV vaccination			
41 reports of cervical cancer after HPV vaccination			
	21,634	Adverse	Events
95 Deaths			

The numbers reflect approximately, 1 to 10% of the adverse event population reporting. Medical consumers and physicians do not often think that vaccinations harm people – and therefore injuries and illnesses are not immediately associated with the vaccine.

HPV vaccines have been administered to adolescent girls and boys whose parents believed in the government’s vaccine program. They followed their physician’s advice – and have been deceived. What does that say about a government ‘for the people’?

SANE Vax, Inc. is outraged at the injustice shown to these families who now suffer from loss of life or diminished quality of life; outraged by their financial helplessness as they pay for mounting medical bills not covered by health insurance companies.

It is apparent in this country – the only one’s innocent until proven guilty are the government and corporations – who have protected themselves from liability. For the rest of us – well, we are guilty until proven innocent – and the burden of proof lies on our shoulders.

SANE Vax, Inc. has prepared a **Global Concerns about HPV Vaccines Fact Sheet** that includes the peer reviewed analysis, research documents and data that prove the culpability of Merck, GlaxoSmithKline, the CDC, FDA, and NCI in regards to fast tracking the HPV vaccines to medical consumers. The SANE Vax Team believes it is time to hold them accountable for their actions. The Fact Sheet is posted on the SANE Vax, Inc. web site at <http://sanevax.org/news-blog/2011/04/sanevax-presents-gl...> The HPV Vaccine Fact Sheet was created so that it could be shared globally with politicians, physicians, the media and anyone looking for an overview of the concerns about the Gardasil and Cervarix travesty.

We are hoping readers will post the fact sheet to their Social Media Network sites and circulate the fact sheet far and wide. If we cannot get through to our government – then we, the people, need to make it our responsibility to educate other innocent medical consumers to prevent the Grim Reaper from striking down more innocent adolescents.

SANE Vax Inc. is dedicated in our efforts to remove Gardasil and Cervarix from the market until independent studies on their safety and efficacy are conducted. We have become internationally recognized and known for the research and work we have done on this issue. Conversely, we are now being contacted by more mothers whose daughters have been adversely affected by HPV vaccines. Most of these injuries have not been reported to VAERS. We have

even heard of a new death – another previously healthy teenage girl who went to bed on a Sunday night and never got up to go to school the next morning.

**Read the comments from mothers and other innocent girls affected by HPV vaccines. The government and Big Pharma must be held accountable for the innocent lives they have destroyed. Government agencies and pharmaceutical companies have become the Grim Reaper.**

*“My 15 year old autistic daughter was given all three Gardasil injections in 2009, and hasn’t been well since. She’s struggled her entire life with development delay, OCD, stuttering, and a seizure disorder that hasn’t reared its head since she was 9, so we’re not unfamiliar with hardships. Shortly after her last Gardasil injection, she began to have chronic vaginal itching, low grade fevers, severe headaches, abdominal pains, dizziness, leg pains, heart racing, heightened sense of her heartbeat and blood flow, fatigue, and an overall feeling of illness. I’m sure there are other symptoms that I’ve passed off as growing pains, hormones, you name it. I’m relieved to find this group, and join the ranks as another frustrated, determined mother, who is ready to see the makers and distributors of this “vaccine” be accountable for what they have done to our daughters.”*

*“My daughter who has just turned 14 years old has been unable to attend school due to fatigue and nausea and other symptoms since last December 2010. When I took her to her G.P. and had all the usual blood tests done they returned as normal. I did mention to the doctor that my daughter had had her second HPV injection at school just before she began to feel sick, but she dismissed any connection. The third vaccination injection is due this Thursday and I have decided to not allow my daughter have this final injection. Is this o.k. for her not to complete the vaccination programme as I am now suspecting that there may be a connection between the vaccination and her illness? My daughter has just started back to school this week after an absence of over three months. She is attending for only a few hours per day as she is too fatigued to manage any more than that.”*

*“I just had an MRI completed for my lower lumbar spine; I had a minor sports injury. Results read “bladder distention was noted.” I completed my Gardasil vaccine over a year and a half ago, and two months after started noticing extra pressure and pain in my abdomen, and enlarged lymph nodes. Prior to the vaccine, I never experienced any of my “symptoms” and Gardasil is the biggest regret of my life. It was pushed upon me by my 3 doctors for years, promising it was safe, and there were no side effects associated. After I started complaining about tiredness and abdomen pain, major side effects were being brought to my attention. I feel deceived, lied to, and tricked. I experience discomfort and occasional pain when I am intimate with my partner. I have trouble urinating, and urinate frequently now. I am 24 years old, and devastated about my experience and findings. I am depressed and fearful of other complications it may cause in the future and can only be hopeful that I didn’t damage and will not pass on any complications to a child.”*

*“I am writing to u because I was also affected by Gardasil. I now have limbic encephalitis, which is the swelling of the brain, along with heart palpitations which don’t let me sleep, extremely bad headaches, body pain every morning, bone problems, anxiety problems, the list goes on forever. If you can please contact me, I would really appreciate it.”*

###

SaneVax believes only Safe, Affordable, Necessary & Effective vaccines and vaccination practices should be offered to the public. Our primary goal is to provide scientific information/resources for those concerned about vaccine safety, efficacy and need.
