

## HPV Vaccine Questioned Internationally

Posted on May 31, 2009 by ChildHealthSafety

UK health officials have wrongly assumed the human papilloma virus (HPV) vaccine can prevent 70 per cent of cases of cervical cancer and press reports show “*German experts said the assumptions simply did not stand up to scrutiny, and that women remained at risk*”: [Experts Cast Doubt on Claim for ‘Wonder’ Cancer Jabs](#) Sunday Express 31 May 2009:[Cervical cancer jabs cast into doubt after experts question effectiveness](#)Scotland On Sunday 10th May 2009.

The HPV vaccine can have serious adverse effects with high levels of reported adverse reactions. Death and debilitating illness have been claimed but officials do not acknowledge an association.

Germany’s Robert Koch Institute, which makes recommendations on the public funding of vaccines, is reviewing its programme after 13 experts called for a reassessment of its HPV vaccination programme and an end to “misleading information” about the effectiveness of the jab. A spokeswoman said: “Because of the public discussion and some new reports and new statements from the 13 professors, the committee will publish a statement within the next few weeks.”

Dawn Primarolo MP for Bristol South since 1987

The UK’s New Labour Government has been aggressively pursuing the HPV vaccine programme in schools out of sight of parental control. Some consent forms reportedly have no decline option. There are anecdotal reports of young girls being cross-examined in school corridors by health officials on parental consent issues. British Health Minister Dawn Primarolo is closely associated with the pursuit of the policy. The Sunday Express reports Professor Martina Doren, of the Charite Hospital in Berlin:

What concerns us is that the two manufacturers of the vaccine aren’t always using facts. They claim that a lot of high-risk strains of cancer-causing virus are protected against but equally there are others that are not. If protection is not more than 20 per cent then that is an awful lot of money to be spending, particularly as the vaccines have quite serious side-effects.”

A spokesman for GlaxoSmithKline, which makes Cervarix, was unable to provide figures on cases of pre-cancerous cells in women who have taken the vaccine, compared with those who have not.

Scottish Conservative health spokeswoman Mary Scanlon said: “Given this new research, it is now incumbent on the Scottish Government and the chief medical officer to review the vaccination programme to ensure that it lives up to the expectations of preventing cervical cancer.”

The HPV vaccine programme is based on recommendations of the UK’s Joint Committee on Vaccination and Immunisation. This highlights questions over the competence of the UK’s JCVI to make recommendations on UK vaccination programmes and the competence of medical professionals in general to express opinions on scientific matters.

The JCVI has a documented history of recklessness over vaccination policy and a needle-happy reputation along with concerns about financial and other conflicts of interest: [Secret British MMR Vaccine Files Forced](#)

[Open By Legal Action](#) but from April 1 this year has been given in unfettered control of UK Government vaccination policy for England: [UK Government Hands Drug Industry Control of Childhood Vaccination](#). And as the British Medical Journal confirms Doctors are not scientists: [Doctors are not scientists — Smith 328 \(7454\): BMJ](#).

If the vaccine is not effective, then its adverse effects cannot be justified but in the UK we see no official comment on the vaccine's risk profile. This highlights how public safety issues fail to be addressed as a result of what some claim is a quasi-religious belief created by the drug industry in the importance of vaccines and the fear medical professionals have of making public criticisms on safety grounds.

The push for mass vaccination is driven by the commercial interest of the drug industry in moving to new business models. Financial markets have known for 20 years and more the pharmaceutical industry's blockbuster patented drugs business model would eventually fail

The Bill Gates' Microsoft type business model is one of the emerging replacements – almost everyone has Windows software on their PC – almost everyone will be vax'ed. Gates quickly became a multi-billionaire. With vastly more people to vaccinate than computers requiring software the lure of money for the pharmaceutical industry is substantial.

Alongside the expansion of vaccination programmes the childhood prevalence of lifetime conditions like asthma, allergies, autism, diabetes and others requiring further medications have increased substantially.

## **Treatise on Gardasil from the United States**

This paper will focus on five areas: (1) Compromised immune systems in adolescents and potential vaccine reaction; (2) Exposure of HPV to infants and children prior to inoculation; raising concern that the vaccine will be rendered ineffective (Botha); (3) Examination of FDA documents regarding adverse events and efficacy. Neurological affects of Aluminum (Janak); (4) The fast tracking of Gardasil through the FDA without due scientific process and adequate research (Janak); (5) The pharmaceutical industry in the United States has systematically influenced the regulatory agencies and research facilities to fast track drug trials and manipulated their outcome. (Chevalier-Batik) [Link to document.](#)

## **United States Concern for Europe with regards to Cervarix HPV vaccine.**

This paper will focus on four areas: (1) European Public Assessment Report, (26/11/2008 Cervarix-H-C-721-II-04), (2) Cervarix© Product Information (PI\_Cervarix.pdf.), (3) MHRA (Medicines and Healthcare products Regulatory Agency) March, 2009 and May, 2009. (4) Media reports. (brackets my emphasis) [Link to document.](#)

## **United Kingdom Concerns Regarding HPV-GM Vaccines**

The following points are the serious concerns of the above authors from the United Kingdom (representing Scotland and England) who have researched the Cervarix vaccine in depth. They have noted media concern over many young girls adversely affected by serious illnesses, such as several forms of paralysis including Bells palsy, hemiparesis, hypoaesthesia and Guillaine-Barre Syndrome. Convulsions, seizures and epileptic fits, along with diminished vision have also been cited. The UK Health Minister, Dawn Primaralo and Scottish Health Minister Shona Robison, deny that these illnesses are connected to the vaccine and that they are coincidental in nature.

## **The Dutch Cervarix Concerns**

We probably speak a different language than you do. Not only because we're Dutch, but also because we're not scientists, medical specialists or journalists. We consider ourselves professors in everyday life and even more, we're mothers. It was September 2008 when we first read an article about Gardasil. Meanwhile it has become a daily routine to read all the news (good and bad) about HPV, Gardasil and Cervarix. Although we had read enough about what was going on in the US we never expected to come in the middle of the same scenario in Holland. [Link to document.](#)

## **One Mother's Plea**

Karen Maynor of New Mexico lost her daughter, Megan Hild to the Gardasil vaccine on November 15, 2008. Megan was a healthy, vital 20-year-old young woman with great aspirations –and no history of previous medical problems. Megan had just finished the second in the series of the Gardasil vaccination in September of 2008.
