

Julie Gerberding Admits on CNN that Vaccines Trigger Autism

Dear Friends,

This weekend, the head of the CDC, Julie Gerberding, went on CNN's House Call with Dr. Gupta and admitted to what parents like me have been claiming for at least two decades. That vaccines trigger autism in a subset of the population.

But the problem is, she did it with such subtlety that no one in the media seems to have noticed yet.

Please take a look at the video of her admission:

[Julie Gerberding Admits on CNN that Vaccines can Trigger Autism](#)

I encourage you to forward this to friends and especially to your representatives in congress whose job it is to hold Dr. Gerberding accountable. You can email the video to your representatives with your message by going to <http://Senate.gov> and choosing your state from the drop down menu; and going to <http://house.gov> and entering your zip code.

I also encourage you, to encourage the physicians in your life to demand straight answers on this from HHS, CDC and especially the AAP.

Further, consider forwarding this to your local media outlets as they will likely be preparing stories for Autism Awareness month which begins today, and World Autism Day which is tomorrow, April 2nd.

This admission CANNOT be allowed to go unrecognized. Pediatricians HAVE to be given an accurate assessment of risk of neurological damage in order to make informed, ethical vaccination recommendations, in order to be able to recognize serious vaccine injury at its early stages (fever, extreme distress, extreme lethargy, seizures, bowel problems, etc.) and in order to learn how to treat them quickly before autoimmune symptoms surface and autistic regression occurs.

We MUST know which children have mitochondrial disorders that make them

vulnerable to autism induced by vaccinations and other toxic exposures.

Our health authorities must be held accountable for the damage that has been done to beautiful children like my Chandler.

At the height of the US polio epidemic, the rate of infection was 1 in 3000. The Autism rate in the US is now at 1 in 150 nationally, and in some US states and in the UK nationally, it has reached 1% of children. It is increasing at a rate of between 10% and 17% a year. Yet year after year, CDC does NOTHING.

This insanity has to stop. The only way that will happen is if you demand answers.

Thank you for your consideration,
Ginger Taylor, M.S.

Whose 6 year old son is recovering from vaccine induced autism through biomedical intervention

(...and whose son, following another round of IV chelation, held the door for her for the first time in church on Sunday and said, "Here mom, I'll open the door for you"!)
