

## **MMR deaths awarded by VDPU but denied by UK government**

"Jabs has also had reports of 24 deaths, which contrasts with the government's claim of parents that one dose of MMR does not cause death.

The VDPU, for example, has made a payment to the parents of [Hannah Buxton](#), who died of a massive fit after receiving MMR at 18 months. The parents of Chloe Dwyer, who died of Guillaine-Barre syndrome after receiving her first MMR at four-and-half, also secured a payment.

As Jackie Fletcher of Jabs said: "The drug companies acknowledge side effects; scientific studies shows there have been side effects. Parents report them. But the government says it can't happen."--Private Eye MMR Report p13 May 2002

"Despite this, the Department of Health insists no child has ever died from MMR." <http://www.whale.to/v/mmr101.html>

"The conclusion time and time again is that the (MMR) vaccine is safe." Dr Elizabeth Miller Public Health Laboratory Service, 22 January, 2001

"This (MMR) is a safe vaccine."-----Dr David Salisbury, Government immunisation programme
