[1921] There are no adequate statistics showing these fatalities, but it may be estimated that in England and Wales no fewer than **6,000 Infants are Killed every Year by Vaccination**. This is perhaps the least part of the damage. The Great Damage is that caused to Teeth, Eyesight and Constitution, by the illness of vaccinia forced upon the infant at the most critical and delicate period of its life. [\[1921\] Vaccination and the State By Arnold Lupton MP.](#)

[1880] That since Vaccination has been rendered obligatory, infantile syphilis (under one year old) has been increased in England, according to a Parliamentary return, dated February 25th, 1880, from 472 per million of births in 1847, to 1,736 per million in 1877, or fourfold; and that other inoculable diseases, such as pyaemia, scrofula, erysipelas, and bronchitis, were also augmented in infants. In England, the increase of inoculable diseases was 20 per cent., notwithstanding an expenditure of 200 millions sterling since 1850 in sanitary works. Another Parliamentary return (No. 443, Session 1877) demonstrates that **25,000 babies are yearly sacrificed by diseases excited by Vaccination**. [International Anti-Vaccination League points against vaccination 1880](#)

England and Wales

[1880] "25,000 babies are yearly sacrificed by diseases excited by Vaccination."

[1921] "6,000 Infants are killed every year by Vaccination."

Anti-Vaccination League

"The fact that with less vaccination the town enjoyed better health, and the coincident decline of vaccination and small-pox, had great effect on the minds of the people of Leicester. Not small-pox alone, but the infantile death-rate, the whole of the zymotic (infectious) diseases, and the general death-rate, all declined in a very marked degree, as vaccination was discarded."

J.T. Biggs (1912)

"Our improved sanitation, and rejection of vaccination, are saving nearly 1,400 lives annually from the zymotic (Small-Pox, Measles, Scarlet Fever, Diphtheria, Whooping Cough, Simple Fevers, and Diarrhoea) group of diseases alone!

J.T. Biggs (1912)

"Whereas in the high vaccination period of 1866-72 there were 107 deaths per thousand living at that age, now there are only 34 per thousand, being a decrease of 73 per thousand, or a saving of 68 per cent. This represents a saving of over 2,200 lives each year of children living under five."

J.T. Biggs (1912)
