[VACCINATION A FAILURE AND A DANGER TO HEALTH FROM ITS INCEPTION--William Tebb](#)

"I know of one epidemic of smallpox comprising nine hundred and some cases in which 95 per cent of the infected had been vaccinated, and most of them recently. I have had in my own experience one very small epidemic comprising 33 cases, of which 29 had vaccination histories a "good" scar, and some of them vaccinated within the last year. There was no protection there."

Dr. William Howard Hay (1937)

SMALLPOX VACCINE USELESS (KNOWN FOR AT LEAST

"During 10 outbreaks of smallpox between 1947 and nearly 100 people became ill with smallpox---even had been vaccinated."

Smallpox Vaccination in the PHILLIPINES 1905-1920

"Between 1918-1919 there were 112,549 cases of smallpox notified, with 60,855 deaths. Systematic (mass) vaccination started in 1905, and since its introduction case mortality increased alarmingly."

Dr Archie Kalokerinos M.B.B.S, PhD, F.A.P.M.

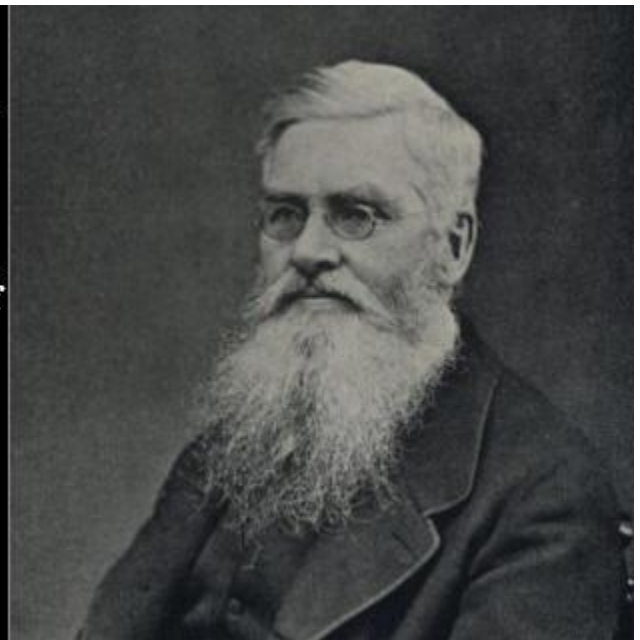

[Archie Kalokerinos M.D PHILLIPINES 1905-1920](#)

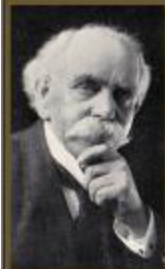

"Dr. Munk stated before the Hospital Commission, that the percentage of vaccinated patients in the London small-pox hospital had increased from 40 per cent. in 1838 to 94.6 per cent. in 1879 (3rd Report of Royal Comm., Q. 9090). This evidence was given in 1882; but Mr, Wheeler stated that according to the Reports of the Highgate hospital, the vaccinated patients had long been over 90 per cent of the whole, and are now often even 94 or 95 per cent."

Alfred R. Wallace

(1898 VACCINATION A DELUSION)

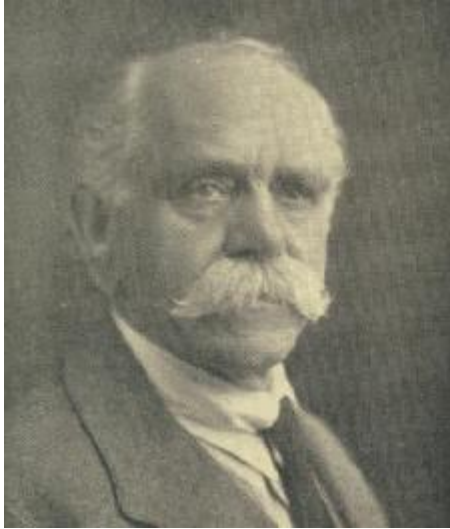

[Wallace, LL.D. \(1889/1898, Alfred R.](#)

"Since the passing of the (compulsory vaccination) Act in 1853 we have had no less than three distinct epidemics. In 1857-9 we had more than 14,000 deaths from smallpox; In the 1863-5 epidemic the deaths had increased to 20,000; and in 1871-2 they totalled up to the tune of 44,800."

Dr. Walter R. Hadwen, M.D. (1896)

"Since the passing of the (compulsory vaccination) Act in 1853 we have had no less than three distinct epidemics. In 1857-9 we had more than 14,000 deaths from smallpox; in the 1863-5 epidemic the deaths had increased to 20,000; and in 1871-2 they totalled up to the tune of 44,800."

Dr. Walter R. Hadwen, M.D. (1896)

"Compare these well vaccinated countries with Australia, the least vaccinated country in the world. In 134 years, not one-fifth of the children born have been vaccinated. Yet only three Australian children under five have died of that disease. In the last 50 years, no child under five has died of smallpox, and in the whole of her history, less than one person per annum has died of it, although allowing five years protective period, only 2 per cent, of her population have ever been "protected."

M. BEDDOW BAYLY M.R.C.S., L.R.C.P.

"The fact that with less vaccination the town enjoyed better health, and the coincident decline of vaccination and small-pox, had great effect on the minds of the people of Leicester. Not small-pox alone, but the infantile death-rate, the whole of the zymotic (infectious) diseases, and the general death-rate, all declined in a very marked degree, as vaccination was discarded."

J.T. Biggs (1912)

"It is pathetic and ludicrous to say we ever vanquished smallpox with vaccines, when only 10% of the population was ever vaccinated."

Glen Dettman A.M.M., BA, Ph.D., F.A.P.M.

"Compare these well vaccinated countries with Australia, the least vaccinated country in the world. In 134 years, not one-fifth of the children born have been vaccinated. Yet only three Australian children under five have died of that disease. In the last 50 years, no child under five has died of smallpox, and in the whole of her history, less than one person per annum has died of it, although allowing five years protective period, only 2 per cent, of her population have ever been "protected."
