EDWARD JENNER

Even Dr. Major Greenwood, Chief Statistician to the Ministry of Health, declared in 1929 that: 'In Jenner's classical paper no mistake was omitted that could possibly have been made, and there was a good deal of evidence that Jenner had been a rogue.' In his well-known work, 'Epidemics and Crowd Diseases' (1935), Professor Greenwood wrote: 'Most of Jenner's time during the last twenty years of his life was spent in attempting the impossible, i.e., in attempting to convince his correspondents that no properly cowpoxed person could get smallpox.'

FEARMONGERING LIE

"There is no doubt, however, that the risk has been, for some years, vastly exaggerated, seemingly to prepare the public mind to accept the new (Diphtheria) vaccine."

"It also appears that in spite of the fact that it had been a matter of clinical observation that human beings suffering from a deficiency of Vitamin B6 have a lowered resistance to infection, a considerable number of monkeys were subjected by Bodiant to an investigation in which they were deprived of this vitamin (pyridoxin) and then exposed to infection. The results seemed to confirm clinical experience."

POLIO VACCINE STATUS LIE

"Dr. Thomas Francis did not mention in his key evaluation of the 1954 Salk field trials that those who contracted polio after their first inoculation and before their second inoculation were placed in the 'not-inoculated' list."

DIAGNOSIS LIE

"In the thirty years ending in 1934, 3,112 people are stated to have died of 'chicken-pox,' and only 579 of smallpox in England and Wales. Yet all the authorities are agreed that chicken-pox is a nonfatal disease"

SMALLPOX VACCINE

Dr. Louis Parkes, Chairman of the Council of the Royal Sanitary Institute, declared in 1922:

"Our freedom from smallpox, therefore, could not be attributed to vaccination. It was largely due to the preventive measures taken at the ports, to the isolation of cases in hospitals, and to the steps taken to control persons who had been exposed to infection."

DIPHTHERIA VACCINE

"The Chief Medical Officer of the Board of Education, SIR GEORGE NEWMAN, has described the procedure as a 'safe, practical and efficient method of protection'....No reference to the disasters which have been recorded in various parts of the world, nor to the severe reactions which are a frequent sequel to the inoculation, is made in these official statements."

VACCINE 'LYMPH'

"It would seem to be impossible for a rational mind to conceive that a filthy virus derived from a smallpox corpse, the ulcerated udder of a cow, or the running sores of a sick horse's heels, and cultivated in scabbed festers on a calf's abdomen could fail to have disastrous effects when inoculated into the human body. As Professor McIntosh remarked in the Lancet in 1926, "Scientifically it cannot be disputed that from every point of view the injection of virus capable of multiplying in the body of the individual is bad."

M. Beddow Bayly M.R.C.S., L.R.C.P.

[Bayly, Beddow](#) [Lymph](#)

"Compare these well vaccinated countries with Australia, the least vaccinated country in the world. In 134 years, not one-fifth of the children born have been vaccinated. Yet only three Australian children under five have died of that disease. In the last 50 years, no child under five has died of smallpox, and in the whole of her history, less than one person per annum has died of it, although allowing five years protective period, only 2 per cent, of her population have ever been "protected."

M. Beddow Bayly M.R.C.S., L.R.C.P. (1936)
